## Chapter 1: Initiated

---

### general description

Iridology is a technique of alternative medicine that can examine patterns, colors and other characteristics of the iris to determine information about a patient's systemic system health. Practitioners adjust their observations to iris charts, which divide the iris into areas that correspond to specific parts of the human body. The belief that the eyes are "windows" to the health of the body.

Use of the application allows the user to photograph his eyes and receive information about his health condition, personal recommendations and the way of treatment.

---

### Project target

Iridology makes it possible to open a window to a person's state of health physically, emotionally and mentally, and to understand his personality structure. The iris reveals structural strength, hereditary weaknesses, health condition and what happens to the tissues and organs in the human body according to his lifestyle. Accurate diagnosis of arc provides information that is difficult to obtain in other methods. This information has great value, containing findings on the physical, emotional / mental and mental levels.

This app allows for experience in alternative diagnosis, which provides information for the health condition and genetic tendencies of the user and thus provides answers to a large part of the symptoms and morbidity that he experiences. In addition to the diagnosis and findings, various personal recommendations are received in the field of nutrition, sports and a healthier lifespan.
